Education

Bachelor of Science degree in Computer Science

School of Electronics Engineering and Computer Science, Peking University

September 2018 - July 2022

Beijing, China

Ph.D. Candidate in EDA

School of Integrated Circuits, Peking University

September 2022 - now

Beijing, China

- Research: compilers, DSLs, hardware-software co-design, and innovative agents for advancing kernel development on new chips.

Work Experience

Large Language Model Algorithm Intern

ByteDance Seed

2026 – Present

Beijing, China

- Creating innovative agents for advancing kernel development on new chips.

Research

My research builds compiler-centered hardware-software co-design systems for domain-specific computing, and more recently innovative agents that advance kernel development on new chips. The central problem is how real software demands can be translated into reusable architectural capabilities, realized as high-quality hardware, and exposed back to software through compiler interfaces and agentic workflows that remain analyzable, verifiable, and reusable.

Architecture customization. I explored compiler techniques and formal methods, especially e-graphs, to automate ISA customization and compiler adaptation. *ISAMORE* (DOI) finds reusable custom instructions by anti-unifying equivalent program fragments. *Cayman* (DOI) discovers accelerator opportunities from whole applications while optimizing control flow and data access. *APS* (DOI, GitHub) and *Aquas* (preprint) connect customized hardware capabilities to retargetable compiler support.

Hardware synthesis. I created intermediate representations at multiple abstraction levels and proposed synthesis passes that optimize timing, microarchitecture, mapping, and scheduling. *Hector* (DOI, GitHub) provides a multi-level MLIR substrate for hardware synthesis. *Cement* (DOI) and *Cement2* (preprint) make cycle timing and temporal transactions

first-class FPGA design abstractions. *Clay* (DOI) synthesizes microarchitecture-aware ASIP instructions, while *SkyEgg* (preprint) uses e-graphs for joint implementation selection and scheduling.

LLM techniques. I explored both LLMs for compilers and compiler/system techniques for LLMs, including innovative agents for accelerating kernel development on new chips. *EggMind* (preprint) uses LLMs to synthesize reusable equality-saturation strategies. *IntelliC* (GitHub) studies inspectable compiler representations for human and agent collaboration. *Spine* studies verification-bounded agentic co-design, using typed semantic boundaries and executable checks to connect design intent, architecture descriptions, hardware/compiler artifacts, and validation feedback in a traceable closed loop. *PTO Runtime* (GitHub) executes compiled task graphs for serving on Ascend chips and LingQu SuperPods. *Hive* (preprint) extends the systems view to multi-agent inference infrastructure.

The closed loop is that architecture customization exposes reusable hardware capabilities, hardware synthesis turns them into efficient implementations, and LLM-era techniques advance the earlier compiler and co-design toolchains while providing evolving capabilities that make the loop practical and self-improving.

Honors and Awards

学术之芯	2026
Awarded to 8 students for academic excellence	School of IC, Peking University
博士研究生校长奖学金	2026-2027
Awarded to 10 students in School of IC, Peking University	Peking University
ASPLOS 2026 Best Paper Award	March 2026
Finding Reusable Instructions via E-Graph Anti-Unification	5/1048 submissions
Second Place in EDATHON 2020	August 2020
Programming Competition on Electronic Design Automation	IEEE CEDA Hong Kong Chapter
Shenzhen Stock Exchange Scholarship	2019-2020
Awarded to 17 students from EECS, Peking University	
Merit Student	2018-2019 & 2019-2020
Awarded to top 10% students for comprehensive excellence	
Yang Fuqing & Wang Yangyuan Academician Scholarship	2018-2019
Awarded to only 5 students at EECS, Peking University, for academic excellence	
Second Prize in NOI 2017	July 2017
National Olympiad in Informatics	China Computer Federation
Second Prize in APIO 2017	May 2017
Asia Pacific Informatics Olympiad (China District)	China Computer Federation
