Education

Bachelor of Science degree in Computer Science

School of Electronics Engineering and Computer Science, Peking University

September 2018 - July 2022

Beijing, China

Ph.D. Candidate in EDA

School of Integrated Circuits, Peking University

September 2022 - now

Beijing, China

Research

My research focuses on software techniques for MLSys, computer architecture, and EDA, with emphasis on domain-specific languages (DSLs) and compiler techniques.

Hardware Synthesis & EDA: I develop multi-level intermediate representations and synthesis tools that bridge high-level specifications and RTL implementations. Key contributions include *Cement* (FPGA '24), a cycle-deterministic embedded HDL in Rust, and *Hector* (ICCAD '22), an MLIR-based multi-level IR for hardware synthesis. I also explore e-graph techniques for hardware optimization in the *SkyEgg* project.

Computer Architecture: I work on automated generation of domain-specific accelerators and custom instructions. *Cayman* (DAC '25) combines application profiling with design space exploration for accelerator generation. *ISAMORE* (ASPLOS '26 Best Paper Award, 5/1048) uses e-graph anti-unification to find reusable custom instructions.

Hardware-Software Co-Design: I lead the *APS* project (ICCAD '25 Invited), an open-source framework that generates optimized processor architectures, RTL implementations, and compiler support from target applications—towards fully automated co-design without manual intervention.

ML Compilers & Systems: I am actively researching retargetable tensor compilers, distributed tensor compilation and runtime systems, agentic superoptimization with LLM-driven equality saturation, and inference infrastructure for multi-agent systems.

Publications

- **Youwei Xiao**, Chenyun Yin, Yitian Sun, and Yun Liang. 2026. Finding Reusable Instructions via E-Graph Anti-Unification. In Proceedings of the 31st ACM International Conference on Architectural Support for Programming Languages and Operating Systems (ASPLOS '26). [Best Paper Award, 5/1048]

Preprints

- Yuyang Zou, **Youwei Xiao**, Yansong Xu, Chenyun Yin, Yuhao Luo, Yitian Sun, Ruifan Xu, Renze Chen, and Yun Liang. Aquas: Enhancing Domain Specialization through Holistic Hardware-Software Co-Optimization based on MLIR. arXiv:2511.22267.
- **Youwei Xiao**, Yuyang Zou, and Yun Liang. SkyEgg: Joint Implementation Selection and Scheduling for Hardware Synthesis using E-graphs. arXiv:2511.15323.
- **Youwei Xiao**, Zizhang Luo, Weijie Peng, Yuyang Zou, and Yun Liang. Cement2: Temporal Hardware Transactions for High-Level and Efficient FPGA Programming. arXiv:2511.15073.

Honors and Awards

ASPLOS 2026 Best Paper Award	March 2026
Finding Reusable Instructions via E-Graph Anti-Unification	5/1048 submissions
Second Place in EDATHON 2020	August 2020
Programming Competition on Electronic Design Automation	IEEE CEDA Hong Kong Chapter
Shenzhen Stock Exchange Scholarship	2019-2020
Awarded to 17 students from EECS, Peking University	
Merit Student	2018-2019 & 2019-2020
Awarded to top 10% students for comprehensive excellence	
Yang Fuqing & Wang Yangyuan Academician Scholarship	2018-2019
Awarded to only 5 students at EECS, Peking University, for academic excellence	
Second Prize in NOI 2017	July 2017
National Olympiad in Informatics	China Computer Federation
Second Prize in APIO 2017	May 2017
Asia Pacific Informatics Olympiad (China District)	China Computer Federation

Tutorials

APS: An MLIR-Based Hardware-Software Co-design Framework	January 2026
ASP-DAC 2026	Tokyo, Japan
Agile Hardware Specialization: A toolbox for Agile Chip Front-end Design	May 2025
ISED 2025	Xi'an, China
Agile Hardware Specialization (AHS): A toolbox for Agile Chip Front-end Design	March 2025
ASPLOS 2025	Rotterdam, Netherlands
Agile Hardware Specialization: A toolbox for Agile Chip Front-end Design	March 2025
DATE 2025	Lyon, France
AHS: An EDA toolbox for Agile Chip Front-end Design	January 2025
ASP-DAC 2025	Tokyo, Japan

Projects and Research

APS: Agile Processor Specialization Open-source framework for automated processor specialization from applications to RTL	2023 – Present GitHub
Cement: Cycle-Deterministic eHDL Embedded HDL in Rust with temporal transactions for FPGA design	2022 – Present GitHub
Hector: Multi-Level Hardware IR MLIR-based multi-level intermediate representation for hardware synthesis	2021 – 2022 GitHub
ISAMORE: Instruction Reuse via E-Graphs E-graph anti-unification for reusable custom instructions; ASPLOS 2026 Best Paper Award (5/1048)	2025 – Present
Cayman: Custom Accelerator Generation Accelerator generation with control flow and data access optimization	2024 – 2025
SkyEgg: Hardware Synthesis with E-Graphs Joint implementation selection and scheduling using e-graphs	2024 – Present
Retargetable Tensor Compilers and Superoptimizers Compiler infrastructure and superoptimization targeting NVIDIA, Qualcomm Hexagon, and Huawei Ascend	2025 – Present GitHub
PTO Runtime Distributed tensor compilation and runtime system for large-scale workloads	2025 – Present GitHub
EggMind: Agentic Superoptimizer LLM-driven equality saturation for agentic superoptimization	2025 – Present OpenReview
Multi-Agent Inference Infrastructure Programming surface and control layers for multi-agent systems	2025 – Present

Skills

Programming Languages: Rust, C++, Python, Scala, Verilog, CUDA
Compiler Infrastructure: MLIR, LLVM
ML Frameworks: PyTorch, Tilelang, Triton
