Education

Bachelor of Science degree in Computer Science

School of Electronics Engineering and Computer Science, Peking University

September 2018 - July 2022

Beijing, China

Ph.D. Candidate in EDA

School of Integrated Circuits, Peking University

September 2022 - now

Beijing, China

- Research: agentic LLM infrastructure on emerging AI chips, grounded in compilers, runtimes, and hardware-software co-design.

Work Experience

Large Language Model Algorithm Intern

ByteDance Seed

2026 – Present

Beijing, China

- Built agentic infrastructure for LLM systems on emerging AI chips, covering operator implementation, chip-architecture-aware performance optimization, and automated toolchain development.
- Developed agent workflows that improve LLM serving efficiency on new chips by connecting operator development, compiler/runtime constraints, and hardware-aware optimization.
- Curated agent development data and trajectories from real systems tasks, turning infrastructure work into training signals for stronger coding and systems agents.

Research

My current research focuses on agentic infrastructure for LLM systems on emerging AI chips. I study how agents can implement operators, optimize performance with chip-architecture awareness, and automate toolchain development. This agenda drives LLM systems from two sides: improving model-serving efficiency on new chips, and producing development data and trajectories that strengthen future coding and systems agents.

Agentic LLM infrastructure. My current work builds agents around the real lifecycle of LLM infrastructure on new chips: operator implementation, architecture-aware performance optimization, and toolchain auto-development. The

key systems question is how agent workflows can connect software intent, compiler/runtime constraints, chip-specific optimization opportunities, and reusable development trajectories.

Compiler and runtime substrates. Earlier systems work provides the surfaces that agents can operate on. *IntelliC* (GitHub) studies inspectable compiler representations for human-agent collaboration. *PTO Runtime* (GitHub) executes compiled task graphs for serving on Ascend chips and LingQu SuperPods. *Hive* (preprint) exposes multi-agent LLM workloads to inference infrastructure, while *Spine* studies bounded agentic co-design across design intent, architecture, compiler, hardware, and execution evidence.

Co-design foundations. My publications in compilers, e-graphs, hardware synthesis, and architecture customization form the technical base for the current agent agenda. *ISAMORE* (DOI) and *EggMind* (preprint) show how formal and LLM-guided search can structure optimization. *Hector* (DOI, GitHub), *Cement* (DOI), *Clay* (DOI), *Cayman* (DOI), *APS* (DOI, GitHub), *Aquas* (preprint), and *SkyEgg* (preprint) provide IR, synthesis, runtime, and co-design methods that ground agent decisions in real systems artifacts.

The resulting line of work uses earlier compiler and hardware systems as foundations for the next step: agents that help new chips serve LLM workloads, while the generated development data and trajectories feed back into stronger coding and systems models.

Honors and Awards

学术之芯	2026
Awarded to 8 students for academic excellence	School of IC, Peking University
博士研究生校长奖学金	2026-2027
Awarded to 10 students in School of IC, Peking University	Peking University
ASPLOS 2026 Best Paper Award	March 2026
Finding Reusable Instructions via E-Graph Anti-Unification	5/1048 submissions
Second Place in EDATHon 2020	August 2020
Programming Competition on Electronic Design Automation	IEEE CEDA Hong Kong Chapter
Shenzhen Stock Exchange Scholarship	2019-2020
Awarded to 17 students from EECS, Peking University	
Merit Student	2018-2019 & 2019-2020
Awarded to top 10% students for comprehensive excellence	
Yang Fuqing & Wang Yangyuan Academician Scholarship	2018-2019
Awarded to only 5 students at EECS, Peking University, for academic excellence	
Second Prize in NOI 2017	July 2017
National Olympiad in Informatics	China Computer Federation
Second Prize in APIO 2017	May 2017
Asia Pacific Informatics Olympiad (China District)	China Computer Federation
