Education

Bachelor of Science degree in Computer Science

School of Electronics Engineering and Computer Science, Peking University

September 2018 - July 2022

Beijing, China

Ph.D. Candidate in EDA

School of Integrated Circuits, Peking University

September 2022 - now

Beijing, China

- Research: agents for LLM infrastructure on emerging AI chips, grounded in compiler-driven hardware-software co-design.

Work Experience

Large Language Model Algorithm Intern

2026 – Present

ByteDance Seed

Beijing, China

- Contributed to native multi-agent coding systems, focusing on orchestration strategies and workflow customization with programmable concurrency and human-in-the-loop workflows.
- Applied these approaches to LLM infrastructure by evolving an abstraction-layered operator-optimization skill system and an agent-native compiler stack for emerging AI chips.
- Curated agent development data and trajectories from real systems tasks, turning infrastructure work into training signals for stronger coding and systems agents.

Research

My current research centers on agents for LLM infrastructure on emerging AI chips. I contribute to native multi-agent coding systems by focusing on orchestration strategies and workflow customization through programmable concurrency and human-in-the-loop workflows. I apply these approaches by evolving an abstraction-layered operator-optimization skill system and an agent-native compiler stack, improving LLM serving efficiency while turning real development trajectories into training data for stronger coding and systems agents.

Current direction: agents for LLM infrastructure on emerging AI chips

Compiler and runtime substrates. Earlier systems work provides the surfaces that agents can operate on. *IntelliC* (GitHub) studies inspectable compiler representations for human-agent collaboration. *PTO Runtime* (GitHub) executes compiled task graphs for serving on Ascend chips and LingQu SuperPods. *Hive* (preprint) exposes multi-agent LLM workloads to inference infrastructure, while *Spine* (GitHub) studies bounded agentic co-design across design intent, architecture, compiler, hardware, and execution evidence.

Compiler-driven agile chip design. My earlier research treats compilers as the organizing layer for architecture customization and hardware-software co-design. *Hector* (DOI, GitHub) provides multi-level IRs for hardware synthesis; *Cement* (DOI) couples the cycle-deterministic CmtHDL DSL with the CmtC timing-analysis and control-synthesis compiler; *APS* (DOI, GitHub) builds an open-source MLIR stack from architecture DSLs to hardware synthesis and software compilation, and *Aquas* (ICCAD 2026) extends it with domain-specific memory/synthesis directives and an e-graph retargetable compiler. *Clay* (DOI), *Cayman* (DOI), and *SkyEgg* (preprint) automate microarchitecture and accelerator optimization, while *ISAMORE* (DOI) and *EggMind* (preprint) structure compiler search with formal and LLM-guided methods.

The resulting line of work uses earlier compiler and hardware systems as foundations for the next step: agents that help new chips serve LLM workloads, while the generated development data and trajectories feed back into stronger coding and systems models.

Honors and Awards

学术之芯	2026
Awarded to 8 students for academic excellence	School of IC, Peking University
博士研究生校长奖学金	2026-2027
Awarded to 10 students in School of IC, Peking University	Peking University
ASPLOS 2026 Best Paper Award	March 2026
Finding Reusable Instructions via E-Graph Anti-Unification	5/1048 submissions
Second Place in EDATHON 2020	August 2020
Programming Competition on Electronic Design Automation	IEEE CEDA Hong Kong Chapter
Shenzhen Stock Exchange Scholarship	2019-2020
Awarded to 17 students from EECS, Peking University	
Merit Student	2018-2019 & 2019-2020
Awarded to top 10% students for comprehensive excellence	
Yang Fuqing & Wang Yangyuan Academician Scholarship	2018-2019
Awarded to only 5 students at EECS, Peking University, for academic excellence	
Second Prize in NOI 2017	July 2017
National Olympiad in Informatics	China Computer Federation
Second Prize in APIO 2017	May 2017
Asia Pacific Informatics Olympiad (China District)	China Computer Federation
